#### ABSTRACT

An inservice educational television course, which offered individualized experience in diagnosing specific reading problems and in locating remedial materials, was beamed by communication satellite to 286 elementary school teachers in the Appalachian region. Course evaluation concluded that: (1) participants demonstrated a significant gain in the cognitive area; (2) participants preferred programs which balanced theory and practice; (3) participants scored a nonsignificant change in attitude: (4) site coordinators needed more training as facilitators: (5) a more efficient system of question relay and question screening should be utilized; (6) teacher-to-teacher exchange and field work were highly rated; (7) information retrieval systems would be utilized more frequently if the site coordinator possessed more training, the video program was improved, and the recommended materials were more accessible; (7) equipment performance was excellent; (8) participants considered the course experience valuable. Appendixes contain 25 tables and 4 illustrations, questionnaires, and evaluation forms. This was one of four Appalachian Education Satellite Projects. (NR)

The Technical Report Series of the Appalachian Education Satellite Project is edited and published by the RCC Evaluation Component at the University of Kentucky, Lexington, Kentucky.

The purpose of this series is to document and disseminate information about the design, implementation and results of the AESP experiment.

William J. Bramble and Cathy Whitton
Editors

#### **ACKNOWLEDGEMENTS**

Special recognition is extended to those on the evaluation staff who assisted with the design and implementation of the evaluation of the Diagnostic and Prescriptive Reading Instruction Course (K-6):

·Claudine Ausness

Larry Harding

Robert Wetter

Televised portions of the course produced at the University of

Kentucky Television Studio. The Producer/Director for the televised segments of the course was:

Paul LeVeque

The team responsible for the development and production of the instructional materials included:

Dr. Lowell Eberwein

Mary Clarkson

Carol Harbison

Motsy Johnson

Alice Martinson

Kathy Morsink

Timothy Pasden

Layout and typing of the report by Marianne Truong.

#### INTRODUCTION

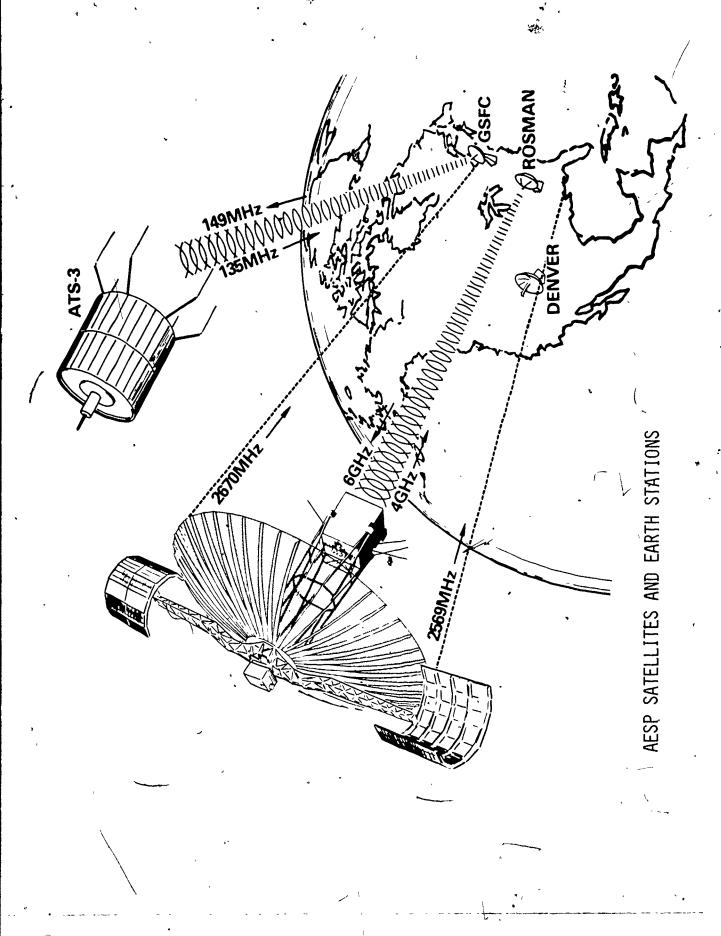

The launching of the Applications Technology Satellite Number Six in May, 1974, signified the beginning of the use of communications satellites for educational television purposes. One of the three educational users of ATS-6 was the Appalachian Education Satellite Project (AESP) which, by means of satellite transmission, has offered four graduate-level teacher training courses—two in career education and two in elementary reading—to 1200 teachers in eight Appalachian states. An illustration of the ATS Satellites and earth stations is provided on the following page.

In July, 1974, AESP inaugurated ATS-6 communication with the first ETV graduate—level program and later with the first live, interactive seminar by sabellite; however, work on the project began much earlier. In 1971, a survey conducted by the Appalachian Regional Commission (ARC) revealed that Appalachian teachers wanted more in-service training in the fields of reading and career education. When the Commission learned that ATS-6 transmission time would be available for educational uses, a program was planned to utilize the capability of such a satellite to deliver training programs to people in an area which includes many relatively isolated, inaccessible communities.

As part of this program, ARC chose five main Regional Education Service Agencies (RESAs) within the satellite's transmission area to

٦

sites for receiving satellite transmissions were affiliated with each main site, for a total of fifteen receiving sites where teachers could meet for "classes" via satellite.

In addition to choosing RESAs, the Commission selected a Resource Coordinating Center (RCC) to develop, produce and evaluate all software and programming for the four courses offered. The ARC decided to choose a university as the RCC for a number of reasons; most important, though, was the fact that many universities would already have most of the necessary people and physical resources needed to develop software particularly appropriate to the agy available (Elèven institutions responded to ARC's request for posals. The University of Kentucky in Lexington was chosen as the Resource Coordinating Center for the AESP.

The RCC was organized into six components: reading, career education, instructional television, four-channel audio, information systems, and evaluation. The reading component was responsible for the development of two courses in diagnostic and prescriptive reading instruction. The first of these two courses was broadcast in the summer of 1974 to an audience of approximately 300 kindergarden through third grade teachers. Each of the twelve sessions of the course incorporated such learning activities as half-hour, videotaped instructional programs; fifteen-minute, four-channel audio instruction; ancillary instructional materials; and evaluation activities. In addition, three times during the course students participated in a live, interactive seminar in which they had an opportunity to query course designers and experts in the area of diagnostic and prescriptive reading instruction.

4

The career education component had similar responsibilities for a course in career education in the elementary grades for the summer of 1974. The format was similar to the reading course, offering twelve half-hour videotaped programs, supplementary materials, and four live, interactive seminars.

The fall of 1974 marked the introduction of a career education course for secondary school teachers and administrators composed of 16 hour-long live, interactive seminars. This course format enabled students to interact with notables in the field of career education and communicate questions to seminar participants through radio and teletype hook-ups (via satellite) with the studio.

In the spring of 1975 a second course in diagnostic and prescriptive reading instruction was offered. The audience for this course was approximately 300 kindergarden through sixth-grade teachers. Using the first DPRI course as a building block, this course incorporated seven new videotaped television programs into the series. A picture of course participants watching one of the programs is presented on the following page. Ancillary materials, live, interactive seminars, and four-channel audio segments were revised to reflect audience changes. In both of these courses the reading component was responsible for script and ancillary materials development. The Component Director also insured that these courses met academic standards for the University of Kentucky and other cooperating universities which granted three semester hours of graduate-level credit for each course. It is the purpose of this report to examine this course in detail, by focusing on the course production, technical aspects, and the participants' reactions to and learning increments gained in the course.

Indoor Equipment for Television Reception of Satellite Signals at Fredonia, New York

ERIC\*

#### Course Overview

The spring 1975 Diagnostic and Prescriptive Reading Instruction (DPRI) course was designed to offer teachers individual experience in diagnosing children's specific reading problems and locating materials to remedy those problems. The course featured classroom teachers and students who illustrated new and innovative reading techniques. The course was practical, classroom-oriented, and provided teachers with the following:

- diagnostic procedures
- procedures for combining diagnostic with prescriptive instruction
- prescriptive instructional techniques

#### Course Structure

Students were able to choose from three options for course credit:

- 1. A K-3 program
- 2. A 4-6 program
- 3. A K-6 program

In completing any one of the three options, the students completed 13 units of study. This involved selecting 13 TV programs from the total series of 17, and completing the associated laboratory and four-channel activities. Upon completion of the chosen enrollment program, each participant was granted three semester hours of graduate credit.

#### Course Content and Objectives

The topics and objectives for the seventeen programs\* were:

PROGRAM 1: DPRI INTRODUCTION -- K-3, 4-6, K-6

- 1. identify reading sub-skills
- 2. identify the parts of the diagnostic-prescriptive reading instruction model
- 3. realize the importance of early diagnosis and correction of reading problems

PROGRAM 2: INFORMAL TESTS 1- K-3, 4-6, K-6

- 1. recognize the advantage of informal reading tests
- 2. interpret the results of informal reading tests
- 3. identify the sequence of activities involved in constructing an informal reading inventory

The Potter and Rae book, <u>Informal Reading Diagnosis</u>, from the reference shell was used.

PROGRAM 3: STANDARDIZED TESTS -- K-3, 4-6, K-6

- 1. identify the procedures necessary for effective administration of standardized tests
- 2. interpret the results of standardized tests
- 3. recognize the strengths and limitations of standardized tests

The <u>Stanford Achievement Test</u>, <u>Primary I and II</u> and the <u>Murphy-Durrell Reading Readiness Analysis</u> was used.

\*Although programs from the previous DPRI course (DPRI K-3, Summer, 1974) were used in this course, (DPRI K-6, Spring, 1975) they were not used in the same numerical sequence. Therefore, requests for information on the taped programs for either DPRI course should specify which course is being referred to:

PROGRAM 4: WORD RECOGNITION TEST -- K-3, K-6 option with Program 5

- 1. administer and interpret the results of the <u>Wisconsin</u> Design for Reading Skill Development: Word Attack
- 2. connect diagnosis to the instructional materials.
- identify the sequence of activities involved in going through a complete test-teach-test instructional cycle using the <u>WDRSD:WA</u>

The Wisconsin Design for Reading Skill Development: Word Attack was used.

PROGRAM 5: COMPREHENSION AND STUDY SKILLS TESTS -- 4-6, K-6 option with Program 4

- administer and interpret the results of the <u>Fountain</u> <u>Valley Teacher Support System in Reading</u>
- 2. connect diagnosis to instructional procedures
- 3. identify the sequency of activities involved in going through a complete test-teach-test cycle
- 4. determine the steps a total school needs to go through in implementing DPRI

The Fountain Valley Teacher Support System in Reading was used.

PROGRAM 6: MISCUE ANALYSIS -- K-3, 4-6, K-6

- 1. identify and do the sequence of activities involved in administering the reading miscue inventory
- 2. categorize reading miscues
- compile the results of the reading miscue inventory on coding sheet
- 4. identify Wayne's reading strengths and weaknesses

The Reading Miscue Inventory was used.

#### PROGRAM 7: PRESCRIPTIVE INSTRUCTIONAL SYSTEMS -- K-3, 4-6, K-6

- 1. translate test results into words (descriptors) that can be used to find materials in the retrieval systems
- 2. identify the sequence of steps in the process of materials selection
- determine which skill descriptors are most appropriate for each student
- 4. recognize the strengths and limitations of different retrieval systems

Selected Retrieval Systems was used.

#### PROGRAM 8: DPRI MANAGEMENT -- K-3, 4-6, K-6

- 1. identify several patterns of grouping
- 2. assess the trengths and limitations of grouping patterns
- 3. determine the most appropriate grouping pattern in a given situation
- 4. recognize reasons for using a grouping pattern in a given situation

# PROGRAM 9: READING READINESS AND BEGINNING READING -- K-3, K-6 option with Program 10

- $\ensuremath{\mathsf{l}}_{\text{\tiny $\mathcal{N}$}}$  identify activities used to teach reading readiness and beginning reading
- 2. list advantages and disadvantages of the activities
- 3. determine which activity is most appropriate for a given situation

The Teaching of Reading served as a resource for Programs 9-17.

#### PROGRAM 10: THE EXCEPTIONAL READER -- 4-6, K-6 option with Program 9

- identify activities and procedures to teach the low average and gifted reader
- 2. list advantages and disadvantages of each of the activities
- determine which activity is most appropriate for a given situation

#### PROGRAM 11: WORD RECOGNITION -- K-3, 4-6, K-6

- 1. identify activities used to teach word identification
- 2. list advantages and disadvantages of the activities
- determine which activity is most appropriate for a given situation

#### PROGRAM 12: VOCABULARY -- K-3, K-6 option with Program 13

- 1. identify activities used to teach vocabulary
- 2. list advantages and disadvantages of the activities
- 3. determine which activity is most appropriate for a given situation

#### PROGRAM 13: STUDY SKILLS -- 4-6, K-6 option with Program 12

- 1. identify activities used to teach study skills
- 2. list advantages and disadvantages of the activities
- determine which activity is most appropriate for a given situation

#### PROGRAM 14: COMPREHENSION -- K-3, K-6 option with Program 15

- 1. identify question strategies used to teach comprehension
- write questions to stimulate student responses in various categories (i.e. knowledge, translation, etc.)
- determine the most appropriate question strategy for a given situation

# PROGRAM 15: READING IN THE CONTENT FIELDS -- 4-6, K-6 option with Program 14

- identify activities used to teach reading in the content fields
- 2. list advantages and disadvantages of the activities
- 3. determine which activity is most appropriate for a given  $\langle \tau_i \rangle$  situation

#### PROGRAM 16: DEVELOPING LIFE-LONG READERS -- K-3, 4-6, "K-6

- identify activities that assist in the development of reading interests and tastes
- 2. list advantages and disadvantages of the activities
- determine which activity is most appropriate for a given situation

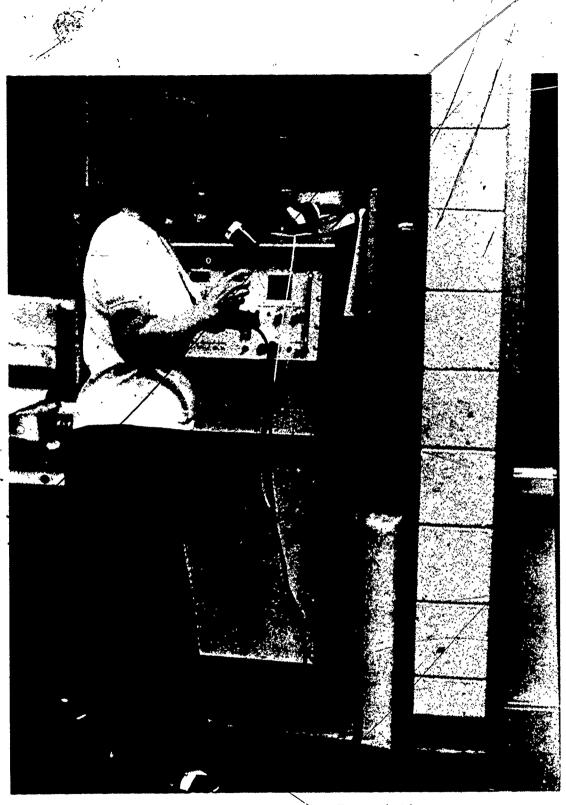

#### PROGRAM 17: TOTAL READING PROGRAM -- K-3, 4-6, K-6

- 1. identify ways to encourage parental participation in reading programs
- 2. recognize the strengths and limitations of DPRI
- 3. determine ways to implement diagnostic-prescriptive reading instruction in a total reading program
- 4. determine ways to establish priorities for implementation of DPRI

In addition all students participated in five, hour-long live, interactive seminars. These seminars were designed to provide students with the opportunity to interact with course designers and experts in the field of reading. A picture of a site coordinator transmitting seminar questions to panel experts is presented on the following page.

Preprogram, laboratory and follow-up activities were carefully outlined for each program in the ancillary materials packets supplied to each student. An important part of these activities was the assignment that each course participant was asked to identify an elementary school student to work with throughout the duration of the course. Working with a student gave each participant practical experience in working with tests and testing procedures.

Huntsville, Alabama Site Transmitting
Seminar Questions Via VHF Satellite Delivery System

In addition to the ancillary materials packet, each course participant was provided with the following materials free of charge:

- Dallman, Martha, and others. <u>The Teaching of Reading</u>. New York: Holt, Rinehart, and Winston, Inc., 1974.
- Goodman, Yetta, and Carolyn Burke. <u>Reading Miscue Inventory Manual</u>. New York: The MacMillan Company, 1971.
- Homme, Lloyd. How to Use Contingency Contracting in the Classroom. Champaign, Illinois: Research Press Co., 1970.
- Madden, Richard, and others. <u>Stanford Reading Test, Primary I, II, and Intermediate I.</u> New York: Harcourt, Brace, and Jovanovich, Inc., 1972. Specimen Sets.

  Analysis. New York: Harcourt, Brace, and Jovanovich, Inc.,
  1964. Specimen Set.
- Otto, Wayne and Eunice Askow. The Wisconsin Design for Reading Skill

  Development: Word Attack. Minneapolis, Minnesota: National
  Computer Systems, Inc., 1972.
- Zweig, Richard L. Fountain Valley Teacher Support System in Reading. Richard L. Zweig Association, Inc., 1972.

#### <u>Supporting Components</u>

The television component, a part of the Media Services Division of the University of Kentucky, played a major role in course development. Its facilities and personnel were used in producing and delivering 17 half-hour videotaped programs; five live, interactive seminars; and seven fifteen-minute four-channel audio reviews for this course.

This component was also very much involved in the formative stages of course development. Since field filming of exemplary classrooms was incorporated into the programming, the producer-director and content experts worked closely in planning and developing each televised program.

The exemplary classrooms were chosen from those identified by the five main RESAs, and were thus representative of the different regions the course served.

Two other supporting components incorporated in this course tested the communication capabilities of the satellite and helped to insure the success of the course. One was the four-channel audio instructional system which was used to reinforce learning in the video programs. To complete the audio review, each participant was, equipped with a head phone set and an answer selection pad with four response buttons. After receiving programmed audio instruction in the form of a hypothetical description of a teaching situation and four alternative approaches to the problem posed, the teacher selected a response by pushing a button. The teacher then heard pre-recorded feedback which reinforced the selection of the correct answer or corrected any misunderstanding if an inappropriate response had been made.

The other supporting component unique to the Appalachian Education Satellite Project and used in this course was the computer-based information retrieval system. This consisted of a combination of computer-based and manual information systems for storing, retrieving and delivering to teachers in their communities information and references for instructional materials. Course participants asked for information by specifying grade level, subject area, objectives, and the nature and diversity of the students in the class they were teaching. Requests were relayed via satellite to the RCC where they were processed. The teachers then received lists of activities and resources for both themselves and their pupils.

Formative and summative evaluation procedures were developed and implemented by the evaluation component. The formative evaluation process assisted with the development of the course. The evaluation component was also responsible for the summative evaluation of the course, including pre- and posttest measures of cognitive and affective achievement, the degree of classroom implementation of the teaching strategies and procedures presented in the course, and participant ratings of the learning activities produced for the course.

In examining this course, the focus will be on answers to the following questions:

- How much did the course participant learn?
- How effective were the learning activities included in the course? How might they be improved?
- How reliable was the equipment used in conducting the course?
- How valuable were the information systems that were available to course participants?
- What was the overall rating of the course?

25

#### **METHOD**

#### Subjects

About twenty participants were enrolled at each of the fiteen sites for the DPRI K-6 course. The number varied because some sites requested that additional students be allowed to enroll due to the demand for reading instruction for classroom teachers in the area; where the facilities could accommodate more students, they were enrolled. In total 315 participants took the pretest and 286 completed all\*course requirements. Complete data (all cognitive and affective pre- and posttest) for analysis were available, for 282 participants. The number of participants at each site by course option is presented in Table 1.

A combined attitude and background questionnaire was administered to the course participants prior to the first televised lecture. This questionnaire which is presented in Appendix 1 was divided into two parts. The first part was concerned with the participants' attitudes toward reading, and the second part asked for some background information concerning educational practices and teaching experience. Table 2 summarizes the background information obtained.

#### Procedures and Instrumentation

To obtain meaningful summative evaluation data for the course, the evaluation component relied upon well-defined procedures and a variety of instruments. (Copies of all instruments except the cognitive pretest, midterm and posttest, appear in Appendix 1.) Table 3 presents the time-line for the course, the instructional activities scheduled for each class session, and the evaluation instruments administered throughout the course.

#### Achievement Tests

Prior to the first class session all students completed a pretest which was composed of 63 multiple-choice questions measuring students cognitive knowledge about diagnostic and prescriptive reading instruction. Following the eighth class meeting students were administered a midterm test. This examination was composed of two parts. The first part contained 35 items based on information contained in the first seven video programs. The second part, composed of twenty items, served as a pretest for four of the last ten programs that were not covered on the initial pretest. This procedure was necessary because of the inability of the Reading Component to provide detailed information about these four programs prior to the start of the course. Thus, these items were constructed after the course began. During the final class meeting a posttest was administered. This test was composed of three separate forms, one for each of the class choices: K-3, 4-6, and K-6. Each version was composed of thirty items which related to the last ten programs. Together, these tests were used to measure the learning in the area of reading which occurred as an outcome of the course.

 $<sup>\</sup>Rightarrow$  \*In addition to the evaluation instruments listed on the table,

the Site Coordinator's Checklist was completed after each class session by the site coordinator; and

<sup>2)</sup> the Class Rating Form was completed by approximately 1/2 of the participants after each TV program, seminar, 4-channel activity and laboratory.

#### Attitude Questionnaire

The attitude portion of the Combined Attitude and Background Questionnaire was administered to participants on a pre-post basis.

The instrument contained 27 Likert scale items, with 1 = completely disagree and 8 = completely agree. The purpose of this instrument was to measure participants' affective attitudes toward the procedures, techniques, and theory of diagnostic and prescriptive reading instruction.

Factor analysis of the instrument revealed a unifactor structure.

The first factor accounted for 70% of the estimated common variance.

Loadings for this factor are presented in Table 4. Items having loadings less than +.30 or greater than -.30 were deleted for purposes of scoring.

Responses to the 21 items remaining on the scale were added together to provide a single measure of the participants' attitude toward the concepts and methods of instruction presented in the course. Item scores were reversed for negatively worded items.

#### Site Coordinator's Checklist

At the end of each class meeting the site coordinator completed the Site Coordinator's Checklist. Using this simple checklist, equipment trouble and the audio and video strength were reported. This instrument also solicited the site coordinator's subjective evaluation of the students' satisfaction with the seminar and lab activities.

#### Class Rating Form

After each class session, approximately one-half of the students completed a Class Rating Form (CRF). This questionnaire dealt with the participants' reactions to the day's instructional activities. The

Item#	Content	Factor Loading
	The state of the s	
16.	A child should not necessarily read all the way through a book.	45
17.	Kindergarten teachers should worry about comprehension.	.58
18.	Work with individuals, even in a large class.	.48
19.	Third grade teacher needs, more than third grade . materials.	82
20.	Understanding graphs and tables is an aspect of reading instruction.	.64
21.	A good reader need not necessarily read every word correctly.	.57
22.	Every page in a workbook need not be used.	.65
23.	Scores on standardized tests aren't adequate for instruction.	.52
24.	There are things a teacher can do to generate enthusiasm.	.62
25.	Time spent diagnosing is well spent.	.61
26.	Effective materials don't necessarily include one copy per student.	.55
27.	Free reading can be productive.	.85

<sup>\*</sup>Items are paraphrased. Negative items are reworded to appear in the positive direction. Signs for loadings are consistent with these rewordings.

<sup>\*\*</sup>Item deleted for scoring purposes.

questionnaire sought reactions to the TV programs, four-channel audio activities, the live, interactive seminars, and the laboratory activities. On a given day, the selected participants filled out only the parts of the form that corresponded to that day's activities. For purposes of completing this instrument the class participants were randomly divided into two groups and the responsibility for completing the instrument alternated between the two groups. Thus on a given class day roughly half of the participants completed the appropriate sections of the CRF.

#### Information Systems Questionnaire

During the last class session participants completed the Information Systems Questionnaire (ISQ). This instrument had two parts. Part I was concerned with the participants attitudes toward the information systems presented in class. The fourteen items in Part I were Likert items to which participants responded on a scale where one equaled strongly agree with the statement and five equaled strongly disagree with the statement. Means and standard deviations were calculated for each item in this section.

Part II of the instrument was concerned with the degree to which participants used information systems to assist them in developing course materials for the classes they teach. These items were of the yes/no variety and frequency counts of the responses were tabulated.

### Summative Comments Form

The Summative Comments form was administered to measure student and site coordinator perceptions of the overall effectiveness of the course. On the first part answers were solicited to determine what site coordinators and participants specifically liked or disliked about the

course. The second part asked them to rate ten instructional activities according to the quantity of useful information they received from each. The standard of reference was the average, graduate level course. An eight-point Likert scale (1 = outstanding to 8 = unacceptable) was used for the rating. Mean scores were calculated for each of the items.

In the introductory section it was stated that this report would attempt to answer five research questions. The results, which follow, are organized around and presented for each of these questions.

- How much did the course participants learn?

As may be seen in Table 5, several versions of the achievement tests were required to measure achievement over the several optional paths available in the course. In order to better analyze gains made in cognitive achievement, it was decided to use as the premeasure the percentage right out of all 83 pretest items; and as the postmeasure the percentage right out of the 35 midterm items plus the 33 final exam items selected by the student. An analysis of variance done on the pre- to postgain, by course option, indicated no significant differences in achievement associated with the different course options. Thus, the option selected was not a variable that needed to be considered in the evaluation of pre- to postgains.

The analysis of variance design used for the gain analysis was as follows. It was decided to analyze gain on the attitude scale along with the achievement test gain. Thus, a multivariate analysis of variance (MANOVA) was appropriate. Procedures described by Finn (1968, 1969) for repeated measures designs were followed. The MANOVA included three factors

29

RELIABILITIES, MEANS, AND STANDARD DEVIATIONS OF COGNITIVE ACHIEVEMENT TESTS TABLE 5

Test	Number of Items	KR-20	Mean	SD	z
Pretest	63	769.	29.05	6.54	315

Midterm - Fountain Valley Option	30	.527	21.70	3.16	96
Midterm - Wisconsin Design Option	30	. 586	22.54	3.31	194
Final K-3 Option	33	. 667	22.38	4.07	87
Final - 4-6 Option	33	.642	23,71	3.81	42
Final - K-6 Option	33*	.668**	22.99	4.19	157

However, there are three option points and each person only \*This test actually had 48 items. answered 33 items. \*\*The reliability was computed based on the 18 common items that each person answered regardless of the options he chose, and this value was scaled up to 33 items using the Spearman - Brown Prophecy formula (Nunnally, 1967, p. 223).

with repeated measures on the third factor. The first factor was RESA triangle (T). This factor had five levels and was considered to have fixed effects. The second factor was sites: since each site was associated with a RESA triangle, the sites were considered to be nested within triangles (S:T). This factor had three levels and was considered to have random effects. The third factor was pre- vs. postcourse administration (A); this factor had two levels.

The MANOVA revealed significant differences between and within triangles due to administrations (Table 6). To determine which of the dependent variables were affected, univarate and step-down F's were computed. These statistics indicated significant effects on the achievement variable for both A and A x S:T sources of variance (Table 7). Results of the MANOVA analysis for the precourse scores (Table 8) indicate that there were differences between sites on the achievement variable (Table 9). The MANOVA run on the postcourse scores (Table 10) revealed no significant differences attributable to triangles or sites.

The mean proportion right for the overall (combined) pre-achievement measure was .489 (sd = .101) and for the overall postmeasure was .714 (sd = .098). This post mean is fairly high, and it may be concluded that mastery of the material was achieved by the participants. Since many of the items had been used before, it was possible to screen out items that were too easy; thus, a mean of over 70% is quite good. The core of these achievement items was the set of criterion-referenced items written for the DPRI K-3 course offered during the summer, 1974. These items were selected and revised based on item reliability, difficulty, and discrimi-

nation indexes. By eliminating the easy and undiscriminating items, the nature of the achievement test changed. It became an instrument that discriminated among individuals based on content knowledge rather than a criterion-referenced instrument that covered all content, trivial or not. Basically, the test became harder, even though 20 new items were added for the new programs.

The reason no gains were recorded for the attitude scale may be that the participants' attitudes upon entry to the course were very positive and it was difficult for the attitude socres to be substantially improved as a function of the course. The pre- and postcourse means for the attitude scale items are presented in Table 11. (These means are not reversed; for obtaining the total score, responses to negative items were reversed). The precourse mean for the attitude scale was 147.288 (sd = 15.402) and the postcourse mean was 153.835 (sd = 16.521). These translate into mean item scores on the eight-point Likert scale of 7.014 (pre) and 7.325 (post) and a per item mean gain in attitude of .311.

- How effective were the learning activities included in the course? How might they be improved?

Information relative to the perceived effectiveness of each learning activity was obtained from the Class Rating Form and the Site Coordinator's Checklist. The learning activities rated were the televised programs, four-channel audio reviews, seminars and laboratory sessions. The Class Rating Form provided separate ratings for each activity on each class day. These ratings are summarized across occasions for each of the learning activities, that is, the frequencies of responses to each alternative of each item are

Note: 8 point Likert scale - 8 = agree = disagree

summed across all TV programs, four-channel audio reviews, seminars or laboratory sessions. These results are discussed in subsequent sections of the report. (For the mean ratings of individual activities see Appendix 2.) Table 12 presents the site coordinator ratings of participant satisfaction with the instructional activities. The frequencies in this table correspond to separate activities except for the ratings of televised programs where two programs were presented on a single day. In this case the rating is given for the two televised programs together.

There is considerable variation in the ratings of activities across occasions, and this information is valuable for program revision or as a guide to the development of new programming of a similar nature. Space does not permit a thorough discussion of each separate televised program, Tab activity, etc. Therefore, the focus of this section will be on the overall participation ratings taken from the Class Rating Form (Tables 13-16) and on the site coordinator ratings reported in Table 16.

Representative student comments will be introduced where appropriate to illustrate the general points that are made.

## Televised Programs

As shown in Table 13 (Part I of the CRF) participant evaluation of the programs (item 14) was "good" to "very good". Assigning point values of 5 for excellent to 1 for poor to the possible responses for the question, a median rating of 3.68 was obtained on this item. Responses to the other items reflected the same general level of satisfaction with the programs.

Students expressed little concern for major revisions of the televised

portions of the course, though in looking at the data for individual programs there are some program specific suggestions which could be made.

Of the three instructional activities rated on the Site Coordinator's Checklist (Table 12), site coordinators rated participant satisfaction with the televised programs the highest, with 69% reporting high satisfaction, 29% moderate satisfaction and only 2% indicating low satisfaction. These ratings are in agreement with those made by participants on the Class Rating Form.

Considering the ratings of Various aspects of the televised programs included in Table 13, the pace of the programs was rated as acceptable (72% responded this way on item 13). Ratings also indicated that the moderator was acceptable as he was (79% on item 6). Further, the level of coverage of the material was adequate (70% on item 3), and there was thought to be an adequate mix between practical and theoretical information presented in the course (items 4-5). The presentation modes (item 1) thought to be most helpful in conveying information were classroom scenes with the moderator providing a description (36%) and classroom scenes of the teacher working with students with no voice-over moderation (29%). The presentation modes (item 2) that were rated least effective in communicating information were segments with the instructor on the set (28%) and interviews with experts and practitioners (23%). Of course, it must be remembered in items 1-2 that the students could only rate presentation modes that were used in the program being rated and that the presentation modes varied across programs. Thus, the ratings here reflect both the degree of usage of the several modes listed as well as their perceived effectiveness.

Several items on Part I of the CRF dealt with rather technical features of television production. These were items 11-12, dealing with the amount of time written materials were held on the screen; items 9-10, dealing with the number of close-up shots used; and item 7, dealing with the presentation and treatment of main ideas conveyed in the programs. The overall response to all of these items was that the set of televised programs was adequate in all of these respects. Specific suggestions for revision may be obtained from the responses to individual programs.

The final item from Part I of the CRF to be discussed is in some ways the most important. Item 8 asked: "What effect do you think today's program will have on your teaching?"

It is encouraging here that 55% of the participants said the information conveyed in the program was something they planned to use in their classrooms, 18% of the participants were already using it, and only 6% thought that it had little or no relevance to their own teaching. Some comments written by the participants as they filled out Part I of the CRF are included low.

"I thought the program was good. My only suggestion would be to take notes."

"I felt many important points were lost because they were covered too quickly."

"Please leave the written lists or charts on longer and have them a little bigger. The transmission of the program was fuzzy and some of the video was lost due to the smallness of the wording."

"One point - the program tends to speed through when listing materials or points, which makes the classroom scene sequences seem more tedious in contrast."

"The program was very interesting and reinforced readings. Needed longer or slower presentation of analysis which is harder for me to grasp."

"I appreciated the exposure to another section of our county school system but was pleased with the examples locally."

"I felt that the lectures are very good, but I would like to see the important summary statements be put on charts for a longer period of time. At times, the summary statements are presented so quickly and I miss many important facts."

"Great organization, beautiful presentation, but too fast."

### \* Four-Channel Audio

Part II of the Class Rating Form queried participants about different features of the audio review segments. As shown in Table 14 the overall participant evaluation (item 52) of the four-channel audio review activities was somewhat lower than that for the televised programs, (though the median response of 3.58 was again in "good" to "very good" range. Accordingly, ratings by site coordinators favored this same trend, with 56% reporting high, 39% moderate and 5% reporting low participant satisfaction with this activity. As can be seen in Table 14, the technical features of the four-channel audio reviews--channel changing, volume, static, etc.,--yere generally rated as excellent (items 41-45). However, there were problems at specific sites, especially regarding the presence of static of odd noises. Regarding the time allotted for choosing a response and the number of items included each day, participants felt that the interval (item 46) was about right (76%) and that the number of items and the length of the items (item 48) was about right as it was (56%). There was some sentiment in support of increasing the number of items (35% chose a, b, or c on item 48).

53	Specific comments		
	a) Yes b) No	75 842	8% <b>92</b> %

Four items from Part N of the CRE concerned the quality of the four-channel questions. On item 49, 73% of the participants expressed the feeling that the items were satisfactory in regard to length and clarity. The tength and number of alternative answers (item 50) were also rated as satisfactory (76%). In terms of the theoretical versus applied orientation of the items, 79% of the participants felt that the items were acceptable as they were. Regarding the length and level of coverage of the explanations of answers included in the four-channel audio review, 74% of the participants felt that the materials were adequate in this respect (item 51).

The comments which follow reflect participants' general likes and dislikes regarding the four-channel audio reviews.

"I enjoyed the four-channel audio segment and found this segment of the program very interesting."

"There is an improvement in the four-channel over last summer. Changes have been made for the better. The directions are briefer and the questions are shorter and clearer."

"The question and responses do not allow me to answer questions accurately. On many questions, I could not find an adequate response and was forced to choose the one that was the least false."

"The alternatives were so ridiculous that they made the correct answer obvious. The choices would be more challenging if they were partially true and we were asked to choose the best of the four."

"I thought the four-channel segment very interesting and helpful. I wish there would have been more questions to answer."

"In my opinion, the four-channel audio segment is the least helpful of the components of this course--especially for all the time and effort of plugging in, etc. It seems like a lot of 'trouble' just to answer four little questions which, to me, could be more of a learning tool if read by the class leader and discussed among the group--or dispense with those questions altogether and let the class members use this time to discuss things that interest or puzzle them about the lab or lecture."

"There were overtones in earphones of other answers due to technical problems, and the delay for selecting an answer resulted in a waste of time for me."

"Four-channel audio was beneficial in that we were able to apply information and were given feedback."

"I benefited greatly from the four-channel audio segment--I would like the time on this segment to be increased."

"The alternatives were too closely related and as I listened I could not see a great deal of difference in most of them."

"I like the four-channel audio segment because it makes you apply what you have gotten in your readings and from the television lectures, but I do feel that there could be more questions given."

#### Seminars

As presented in Table 15, the median overall rating (3.58) for the seminars (item 89) was in the "good" to "very good" range. It is somewhat lower than the rating for the televised programs.

Participants made several suggestions for improving the seminar format. They expressed a desire (item 81) to keep the length of the seminar at about one hour, but to allow a 15-minute intermission (34%) to give students more time to generate questions. Too, participants suggested that they be given more opportunities to generate questions prior to each seminar program (24%). Additionally, (item 83) participants felt that the seminars would be improved by beginning them with short content summaries (38%) or new illustrations or demonstrations (23%). On item 82, most (62%) of the participants felt that the panel composition for the seminars was fine as it was, but 25% suggested the use of more teachers on the panels.

ERIC

The participants felt that the seminar moderator (item 85) could be more effective in providing occasional summaries (54%) and keeping up the pace of the seminar (22%). It was also suggested by some (item 86) that the guests should relate their answers to more practical situations (40%), though 42% of the participants felt that the guests were excellent. Sentiments similar to those expressed toward the seminar guests were expressed in item 84 concerning the relationship between the quality of the seminars and nature of the answers to questions.

A final aspect of the seminar ratings related to the usefulness the transmission via teletype of answers to questions not included during the seminar broadcasts. Participants overwhelmingly (91%) responded (item 88) that this procedure should be continued and (item 87) felt that this was a useful activity (89%).

General suggestions about the seminars are reflected in the following comments made by participants on the CRF.

"Overall, I feel that this seminar (like the others) was very interesting and enlightening. However, I do feel that some of the answers given were a bit 'idealistic'. (I'm basing my comment on my own experiences in six years of teaching plus those experiences related to me by other teachers.)"

"Too many of the questions were similar. Also, much of the time was spent in answering questions which could be answered if people were reading their assignments. Isn't there some way of cutting out this type of question--or at least answering them without all of the students sitting through it. This simply drags the seminar out too long."

"I feel the seminar guests were often too direct--giving a simple answer to a complicated abstract question. I also feel that many of the questions were not worthwhile--a fault of the students."

"The seminar was interesting and useful! I enjoyed the interaction between guests and moderator. It cleared up a lot of problems for me that I've wondered about."

"Someone should be screening the questions more carefully so the speakers do not have to keep repeating themselves over and over again."

"The speakers were not aware of the problems that exist in our area of teaching and therefore could not answer our questions adequately. The questions were not answered directly."

"Questions relating to material already given by the project, such as simple definitions, should be omitted. You have provided us with the definitions of all the terms used. Your seminar is valuable, but should be screened a little more carefully."

"I feel that the seminar would be more effective if the teletype machine were not used during this time."

"Most of us respond enthusiastically to the practical, down-to-earth answers and ideas of the <u>teachers</u> on the panel-- or those who obviously work with children."

"Seminars are too lenghty--hard to sustain interest for full hour. Perhaps have them more often and for shorter periods of time."

"Guests' answers were not direct enough. They answered more optimistically than with a practical viewpoint. Teachers know they need to organize, but how? Guests need to have more practical suggestions for teachers who have no aides and few local resources."

#### Laboratory Activities

In terms of participant satisfaction with the instructional activities, the laboratory activities were rated below the TV programs and above the four-channel audio reviews, according to reports by site coordinators on the SCC. Reports of high, moderate and low participant satisfaction with the labs were 60%, 37% and 3% respectively. Table 16 presents participant ratings from the Class Rating Form. As can be seen from the table, the median overall rating (3.36) of the lab activities was "good" (item 132). In regard to more specific questions, when asked whether the activities were related to the topic (item 125), whether the

	a) Yes b) No	71 1140	6% 94% .

balance between practical and theoretical content was appropriate (item 127), participants overwhelmingly responded in the affirmative. In response to item 130, 84% of the participants indicated that there were sufficient materials on the reference shelf; however, in item 121, 63% of the respondents indicated (across occasions) that there was no need to use these materials.

A number of specific features of the lab were included on this part of the Class Rating Form. The median time spent working on the lab materials (item 122) was about one hour per class meeting, and 84% of the participants indicated (item 126) that this amount of time was sufficient. In item 123 the labs were felt (74%) to include an appropriate level of material coverage. The amount of reading to be completed prior to class (item 128-129) was thought to be appropriate or perhaps (34% on item 128) a little too heavy, and the homework assigned after each class meeting (item 131) was thought to be useful by 89% of the participants.

Participant comments regarding the laboratory sessions were as follows.

"I feel that it would be more beneficial if we could spend more time during our 'labs' completing assignments on site--them if (and when) problems arise, we can get immediate feedback, which I feel would be more beneficial."

"I find the lab very confusing. I feel a need for more specific directions especially in receiving the materials."

"I feel the ancillary packet is the best part of the course-seems to be very well planned and coordinated and we certainly do appreciate the amount of thought that has gone into gathering all the needed information so that we don't have to search frantically for all sorts of things--it's organized clearly and I appreciate its being basically 'self-contained'."

"Having to share one set of materials is difficult."

"There is too much material for length of time allotted. I believe more lab time would result in less confusion."

"The lab is very helpful for individualized reading."

"There was really too much time provided for what activity we had to do."

"I am getting many ideas from the course. I don't mind the readings and generalization sheets, but after working all day at school, I feel that we are asked to do too much outside work. I have a graduate degree and have taken courses in other states. This course has more outside work than any of the other semester courses I've taken."

"It is hard to randomly sit down with someone and begin activities, especially when left to find our own groups (which wasn't true of today's lab). However, I would rather do some of these things with another person, if they are relevant and helpful (which is true of today's lab)."

"The material covered is too much to do a good job with for the length of time that I can spend working on it."

- How reliable was the equipment used in conducting the course?

Three equipment systems were used to transmit the learning
activities of the course. These were: 1) the audio-video delivery system;
2) the VHF-teletype relay system; and 3) the four-channel audio review
equipment system. These systems are depicted in Figures 2, 3 and 4,
which follow, and are described in detail in Technical Report #5 (Bramble,
Ausness and Freeman, 1975).

As illustrated in the aforementioned figures, each of the three delivery systems was dependent on the use of either one or both of the ATS satellites for transmission of the various course learning activities. The pretaped video programs and the four-channel audio reviews were broadcast via the audio-video delivery system, which utilized ATS-6. The live seminars were also broadcast via ATS-6; however, questions to the seminar

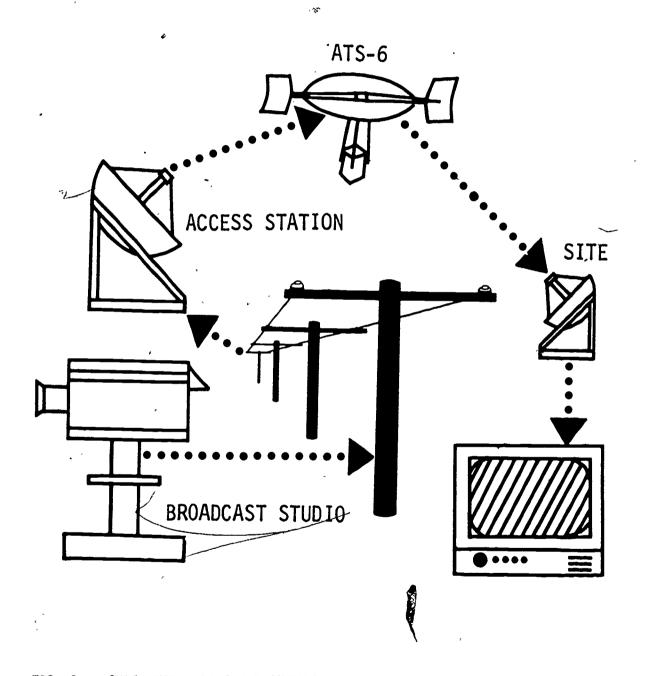

FIG. 2 -- AUDIO-VIDEO DELIVERY SYSTEM

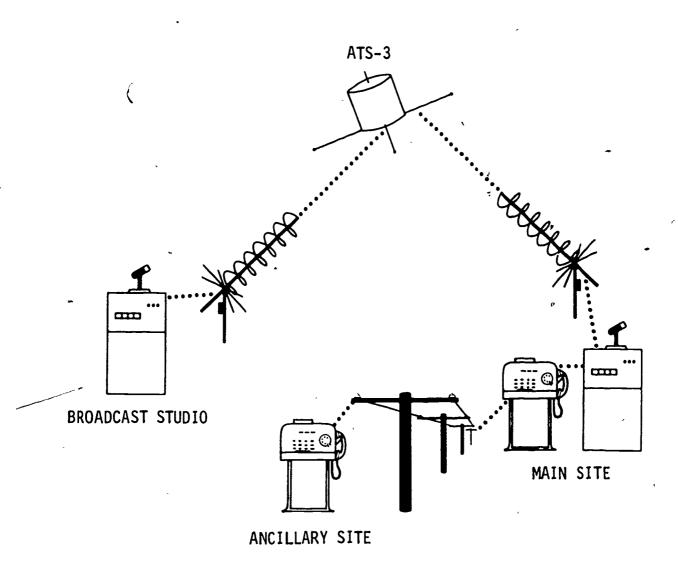

FIG. 3 -- VHF-TELETYPE RELAY SYSTEM

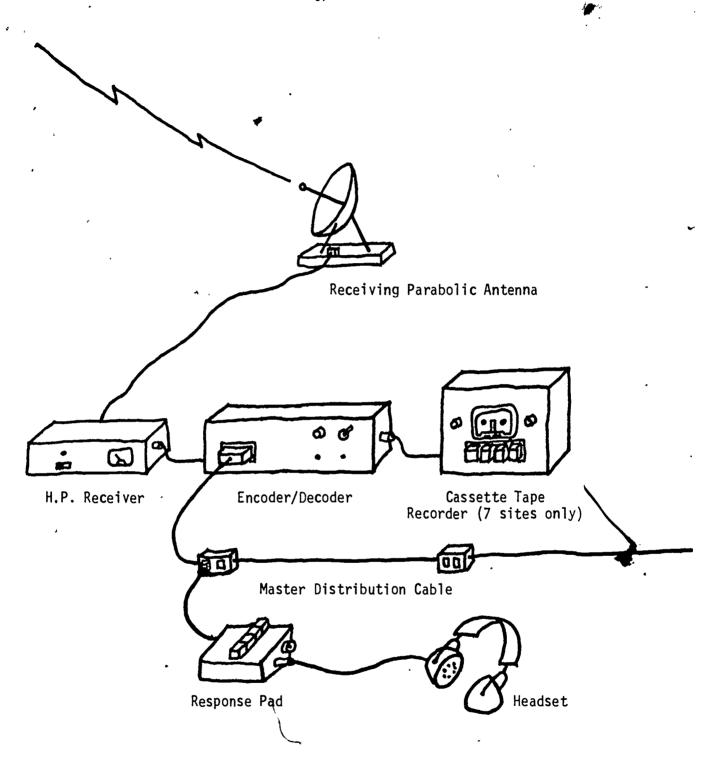

FIG. 4 -- FOUR-CHANNEL AUDIO REVIEW EQUIPMENT AT CLASSROOM SITES

panel were transmitted from the sites via the VHF-teletype relay system, which utilized ATS-3.

To gather information regarding the quality of reception and equipment reliability, the site coordinators were asked to complete the Site Coordinator's Checklist (SCC) after each class session (a copy of this instrument is presented in Appendix 1). The quality of reception ratings from the SCC are summarized in Table 17. As shown in the table, signal quality was either excellent or contained only minor distortion for 97.7% of the TV audio and 99.6% of the TV video transmissions. Too, the VHF radio transmissions were excellent or contained minor distortion 94.0% of the time. These ratings indicate excellent reported reception. These percentages are based on the total number of ratings received each session, rather than on the total number of broadcasts received at each site.

Specific equipment problems reported on the SCC are detailed in Table 18. As may be seen, the greatest number of problems was experienced with the teletype machine, which had a reliability of 88.6%. The TV reception equipment had the highest reliability, 96.8%, with problems being reported only 3.2% of the time. Reliabilities for the VHF and the four-channel equipment were 91.8% and 96.2%, respectively. Some miscellaneous problems related to equipment and other shortcomings of the course are detailed in Table 19.

The reliability and reception quality for this course were the best experienced for all four courses offered by the AESP. From this it appears that most of the "bugs" in the system have been worked out. This high level of equipment performance in ecessary if satellite transmission of educational programs is to become commonplace.

TABLE 17

Delay in program broadcast*	7(8), 12(3), 14(1), 15(2), 16(1)
Low attendance**	5(1), 6(2), 10(1), 11(2), 15(1)
Cancellation or postponement of class***	4(3), 5(1)
Missing laboratory materials****	5(1), 6(1), 7(3), 8(1)
Missing evaluation materials*****	3(1)

<sup>\*</sup>Due to problems at Rosman uplink station for session 7, or due to weak reception problems (loose connections, etc.)

<sup>\*\*</sup>Reasons given either weather, illness or ball games

<sup>\*\*\*</sup>Reasons given were 1) weather and 2) loss of audio signal

<sup>\*\*\*\*</sup>Problems were 1) insufficient copies of one text book, 2) missing a cassette tape for the miscue analysis, 3) missing lost section of laboratory assignment (3 sites) and 4) insufficient copies of laboratory assignments

<sup>\*\*\*\*\*</sup>Problem was insufficient copies of class rating form

- How valuable were the information systems that were available to the course participants?

To gather information regarding the above question, the DPRI Information Systems Questionnaire (ISQ) was administered to the participants on the last day of class. The ISQ had two parts: Part I consisted of ten Likert type statements, and Part II consisted of 22 multiple-choice questions (a copy of the ISQ is presented in Appendix 1).

Part I contained five items that related to the usefulness of the Select-Ed information system and five items that related to the Kentucky information system. These ten items were factor analyzed and two factors (eigen values greater than 1.0) were found. The VARIMAX rotated factor matrix is presented in Table 20. Items were assigned to a factor based on the largest loading for each item. The items included on each factor, the factor names, and the factor means are presented in Table 21.

As shown in Table 21, the factor mean (per item) was 3.80; this indicates that the manuals and request forms were adequate and clearly written and that if available, participants would use these information systems. The mean of factor 2 was 3.40. This is a somewhat positive rating but is a little less strong than the rating for factor 1. This indicates that the participants were moderately positive toward the value of the information provided in the searches and that the searches were easy to interpret.

Part II of the ISQ consisted of 22 multiple-choice items. In Table 22 are presented the frequency and percentage of responses to the alternative choices for each item. This information indicates that the

TABLE 21

FACTOR MEANS FOR LIKERT #TEMS ON DPRI INFORMATION SYSTEMS QUESTIONNAIRE (N=107)

	Factor Name	Items Included on Factor	Factor Mean (sd)
1	The manual and request forms were adequate and clear, and I would use the information systems if they were available to me.	1, 2, 5-7, 10	3.80 (.47)
2	The information searches provided me with useful information and were easy to interpret.	3, 4, 8, 9	3.40 (.55)

participants did not make much use of the information systems except as specificially required to do as part of the course requirements. Only 16% used the Select-Ed system more than the one required time, and only 37% used the Kentucky System at all (items 11 and 12). The participants were allowed to use the information systems as much as they desired to gather information they could use in their reading classes. However, only about half the participants reported being aware of this opportunity (items 26 and 27), and only 58% reported that their site coordinator encouraged them to use the systems more (item 28). This helps explain the low usage rate and points toward a need for more emphasis to be placed on encouraging site coordinators to familiarize themselves with such systems so that they can aid and encourage participants to use them.

Questions 13 through 25 on the ISQ attempted to find reasons for the low usage rate and to identify suggested improvements for information systems usage in the future. Generally, the participants felt that the

TABLE 22

manuals and procedures for running searches were adequate (items 14, 17, 19 and 20). However, the majority felt that further training for the site coordinator and an improved video program devoted to the usage of the information systems would be helpful (items 21 and 22).

A major problem appeared to be that since the information systems provided only references rather than the actual materials, the participants were reluctant to use them. Although this was not reflected in the responses to the two items that specifically ask that question (items 15 and 18), 70% to 90% of the participants reported that they would use the systems more if the materials recommended by the searches were immediately available at some convenient place (items 23, 24, 25 and item 32).

That the information systems were valuable is reflected in the fact that half the participants looked up the materials suggested in the searches

they ran (item 31), and about a third used these materials in their classes (items 29 and 30). With more training for the site coordinator, an improved video program explaining information system usage, and easy access to recommended materials, the usage rate of information systems might be increased.

- What was the overall rating of the course?

The answer to this question was obtained from the participant and site coordinator responses on the Summative Comments Form. On Part II of this form, 246 of the participants rated ten features of the course. Means and standard deviations for these ratings (on an eight-point Likert scale with one being highest are presented in Table 23. The means range from a high of 2.086 for the performance of the site coordinator to a low of 4.043 (slightly above neutral) for the interactive seminars. Features of the course receiving the highest ratings were the performance of the site coordinator, the taped TV programs, the seminar host and guests, the follow-up activities, and the on-site reference materials. All mean ratings were on the positive end of the scale, but features least liked were the interactive seminars, laboratory activities, four-channel audio, information systems and preprogram preparation.

Illustrative comments from the course participants shed some light on the interpretation of these ratings. For example, regarding the participant's very positive ratings of site coordinators the following comments were received:

"Had good organization, knowledge, control of system and gave attention to all students."

TABLE 23

MEANS AND STANDARD DEVIATIONS FOR SUMMATIVE COMMENTS FORM, PART II

(PARTICIPANT RATINGS)

	I,tems	Mean		sd	N
1.	Preprogram preparation	3.142		1.584	254
2.	TV program	2.850		<b>`1.749</b>	254
3.	Four-channel audio	3. <u>2</u> 19		2.197	260
4.	Laboratory activities	3.529		1.796	257
5.	On-site reference materials	3.016		1.681	253
6.	Televised, interactive seminars	4.043		2.244	257
7.	The seminar host or guests	2.930	3	1.599	257
8.	Information retrieval systems	3.165	·	1.798	237
9.	Follow-up activities	\2.964		1.607	253
10.	The site coordinator	) 2.086		1.381	ž 256

8-point Likert scale -- 1 = outstanding, 8 = unacceptable

"The site coordinator is to be commended for keeping the class organized and focusing on the specific purposes designed for the course."

"He (the site coordinator) initiated good discussions and created an informal atmosphere in the classroom which made everyone work better together. I feel that because of this feeling in the classroom, everyone really enjoyed the course."

"With this type of planned, programmed class, the site coordinator is not given a chance to be a leader. There is not much 'programmed' for the site coordinator to do."

Other valuable comments were received from the participants about the course features that received low ratings. For example, the students complained that the main weakness of the seminars was that they were not

practical enough and that the guests often spoke in terms of theory rather than practice.

"They (the seminar panelists) were idealistic and gave no guidance for the classroom."

On the other hand, participants did appreciate the presence of "experts" to discuss certain topics covered in the course.

Regarding the lab activities, except for activities involving group interaction, participants thought the activities would have been more meaningful if completed at home.

"Usually the work was done before class. I enjoyed our class discussions and sharing of activities."

"It was interesting to hear the other teachers' ideas."

"Not enough activity in class--need more interaction among participants."

The four-channel audio instruction received mixed reviews. The following participant comments illustrate the differing perceptions of this activity.

"Very good method of check-up quiz."

"The four-channel audio was very informative and very useful. I loved it:"

"The four-channel audio was a waste of time. Our equipment usually didn't work."

"Some choices were rather ridiculous, making the correct answer obvious."

"It should have been longer." I liked the basic idea of teach and reinforce, but it could be expanded to be more useful."

Comments about the information retrieval systems stressed that the length of turn-around time was too long. Participants were apparently too unfamiliar with the nature of the information available to make useful judgments about its value. Regarding the on-site reference libraries, participants commented that the ready availability of the materials was nice, but that some materials were not needed and conversely some needed materials were in short supply. This indicates that more specific information on materials usage is needed if meaningful changes are to be made in this area.

The site coordinators also rated the first nine features of the course on Part II of the Summative Comments Form. The means and standard deviations for these ratings are given in Table 24. However, due to the limited sample size, the means in this table are much less precise than the means in Table 23. The site coordinators rated the TV programs, seminar host and guests, preprogram preparation, on-site reference materials, follow-up activities and the lab activities as the most positive features of the course. The seminars, four-channel audio instruction and the information retrieval systems were rated poorest. Thus, the site coordinator ratings of course features are not unlike the participant ratings of these same features. Too, comments from the site coordinators generally paralleled those of the course participants. However, the site coordinators were more concerned with difficulties of an organizational or scheduling nature and with problems of understanding instructions for lab activities and the use of the information systems.

The first item on Part I of the Summative Comments Form allowed the participants to identify specific television programs that they liked or disliked. The frequencies with which programs were mentioned are given in

TABLE 24

SITE COORDINATOR RESPONSES ON THE SUMMATIVE COMMENTS FORM

Item	Topic of Rating	Mean	sd	N
1	Preprogram Preparation	2.29	2.14	a 7
2	TV Program	1.75	.71	. 8
3	Four-Channel Audio	4.75	1.67	8
4	Laboratory Activities	2.88	2.36	. 8
5	On-Site Reference Materials	2.33	1.00	9
ć	Seminars	4:25	2.71	8
7_	Seminar Host and Guests	2.00	.87	9
8	Information Retrieval Systems	4.89	2.26	9
9	Follow-up Activities	2.33	1.87	9

in Table 25. As shown in the table, the most liked programs were 7 (Prescriptive Instructional Systems), 16 (Developing Life-Long Readers), 2 (Informal Tests), 14 (Comprehension), 3 (Standardized Tests) and 15 (Reading in the Content Fields). In interpreting these findings, the most important factor that each of these programs had in common concerned the content or topic. The content of each of these programs was fairly familiar to teachers and concerned tests and teaching practices they had had some experience in implementing. Too, the presentation mode in each of these programs was similar—a considerable amount of classroom filming with voice/over explaining the use of these techniques. In contrast, the least liked program was disliked for several reasons: it tried to cover too much complex information about administering, scoring and interpreting the

TABLE 25

17/	Total reading program	1.	1

Reading Miscue Inventory, something which most participants had had no experience with or did not previously understand. The teachers felt that this instrument was too complicated to use in their classrooms anyway and that if the course was to cover this topic, participants felt there should have been at least two programs devoted to Miscue Analysis.

Item two, on Part I of the SCF gave the participants an opportunity to suggest particular revisions which might lead to improvements in the programs. These suggestions are summarized in the results section in the participant comments about the TV programs. In general, participants felt that the pace of most programs was too fast for the amount of material covered. They suggested that more content summaries be included so that important concepts received the proper stress.

Participants were asked in item three if they would recommend this course to their peers. Of the 246 respondents, 238 said they would while only 8 said they would not. This indicates that the overall course rating was positive. In item four, the participants were asked to make specific recommendations for the overall improvement of the course. The following comments are representative of those received.

"I wish there was some way we could develop in depth each concept which has been presented. Too much was offered."

"More specific activities for teaching skills; more detail of reading programs - (ITA; DISTAR)."

"Seminars tend to become boring when students have to listen to answers to everyone else's question that do not apply to them. It would probably be more practical to send back answers to questions through teletype only."

"Less material should be given. I felt that I was lost with so many different materials."

"I think the course had too much 'busy' work. I would have gotten more out of the course by discussing all these activities without writing them down. We are professionals and should be treated as such."

"The course covered a lot of material. I think it would be nice if you could now take single or paired programs and elaborate on them--management, exceptional learners, word attack skills, etc."

"I feel that many of the ancillary activities could be done on our own time."

"We could use more live seminars and group interaction."

"I felt during the lab sessions teachers shared ideas and materials that worked for them. This worked excellently at our site."

## CONCLUSIONS

The DPRI-6 Course, the fourth course offered by the AESP, was an effort to coordinate and perfect the standard features common to all AESP courses. In addition, this course was somewhat of an experiment in that it offered students three course content options from which to choose, making this course more flexible, yet at the same time more tailored and content specific than previous courses.

Based on the information presented in the results section, the site coordinator and participant evaluations of this course lead to the following conclusions:

The particular course option chosen by the participant did not affect pre-to-post achievement gain. As was the case in the past, significant pre-post differences on the achievement variable were due to factors at individual sites. However, the postcourse achievement scores revealed no significant differences attributable to either triangles or sites.

The postcourse achievement mean of over 70% was quite high. From this it can be inferred that participants mastered the course materials.

76

There was a small (non-significant) mean gain in attitude as a result of this course. However, since the precourse means were very positive, an insignificant gain in attitude is understandable.

The ratings of the ten course features were similar to those of previous AESP courses. All ratings were positive, but there was a definite preference for certain activities. As in the past, the features most liked were the taped TV programs, the site coordinator, the on-site reference materials, and the seminar host and guests. There was also agreement with ratings for the other courses on the least liked activities: the four-channel audio reviews, the seminars and the information systems. The labs and the preprogram activities were rated more positively by site coordinators than by participants.

The data suggest that the best-liked television programs were those which contained a balance of theory and practice. The programs which were too abstract or covered too much material were disliked by participants.

Although participants seemed to understand that the site coordinator's role was not that of instructor, their comments suggest that site coordinators need more training as facilitators. It was mentioned frequently that the site coordinator should be well versed in the utilization of

87

information retrieval systems so that he or she could encourage the use of these systems. Too, the site coordinators should take a more activite role in insuring that labs are organized, that students know what they have to do, and that the activities run smoothly.

Even though the seminars were not rated as highly as the taped programs, participants thought that the idea of an interactive seminar was, in itself, valuable. However, participants did not feel that the project made optimal use of its seminar time. They thought that a more efficient system for the relay of questions and a better process for screening questions were needed. Too, they suggested that the seminar moderator take a more active role in guiding the discussions.

The sharing of ideas and experiences provided for in the laboratory sessions was thought to be one of the most valuable aspects of the course experience. It seems that for future courses, the lab sessions should be less "programmed" and the workload more evenly distributed so as to maximize opportunities for in-class interaction. Participants valued the field work completed as part of their follow-up work and suggested that more activities of an applied nature should be incorporated into the worse.

Participants felt that the information obtained from the information retrieval systems was valuable. They suggested that with more training for the site coordinator, an improved video program and easy access to recommended materials, the usage rate of the information systems could be increased.

Regarding the equipment, the reported quality of reception and equipment reliability was excellent, better than in the previous three courses. This high level of equipment performance is essential to the acceptance of education by satellite.

The participants considered the overall course experience valuable. They would take it again, knowing what they now know about the course.

### COMBINED ATTITUDE AND BACKGROUND QUESTIONNAIRE

This questionnaire is divided into 2 parts. The first part is concerned with your attitudes towards reading, and the second part asks for some background information. Please answer as truthfully as possible. Your answers do not affect your grade in the course, but help us to assess the effectiveness of the course and suggest improvements.

Be sure you have a pink Op-Scan form titled "General Coding Form". Write your name on the upper left hand corner of the form. Fill out columns 1 through 9 as indicated by the diagram.

			_				~	
	• 0 •	}	-	• 0 •	• 0 • '	• 0 •	• 0 •	. 0 .
• 1 •	• 1 •	• 1 •	• 1 •		-	. 1 .	. 1 •	• 1 •
• 3 •	_		. 3 .	• 3 •	t 1	. 3 .		. 3 .
• 5 •		R I	•4•			,		• 5 •
• 6 •	-	• • •	• 6 •	• 6 •	• 6 •	• • •	• 6 •	• • •
. 6 4		į '	• 8 •					
494	• • •	• • •	• 0 >	• • •	• 5 •	. , ,	. 5 .	
1	2	3	4	5	6	7	8	9

in column 1 prace a 4 if K-3 5 if 4-6 6 if K-6

in column 2-5 fill in 6001

in column 6-9 fill in YOUR four digit student number

Start your answers in column 31. Use a soft-lead (#2) pencil to mark the answer sheet -- do not use a pen or ball-point. Connect with a heavy line the 2 dots between which your response number lies:

| O | If you change your mind or make a mistake, be sure that you erase completely. Do not make any other marks on the answer sheet.

For each statement in the first part mark

- 1 if you COMPLETELY DISAGREE with the statement
- 2 if you MOSTLY DISAGREE with the statement :
- 3, if you MODERATELY DISAGREE with the statement
- 4 if you SLIGHTLY DISAGREE with the statement
- 5 if you SLIGHTLY AGREE with the statement
- 6 if you MORERATELY AGREE with the statement
- if you MOSTLY AGREE with the statement
- 8 if you COMPLETELY AGREE with the statement

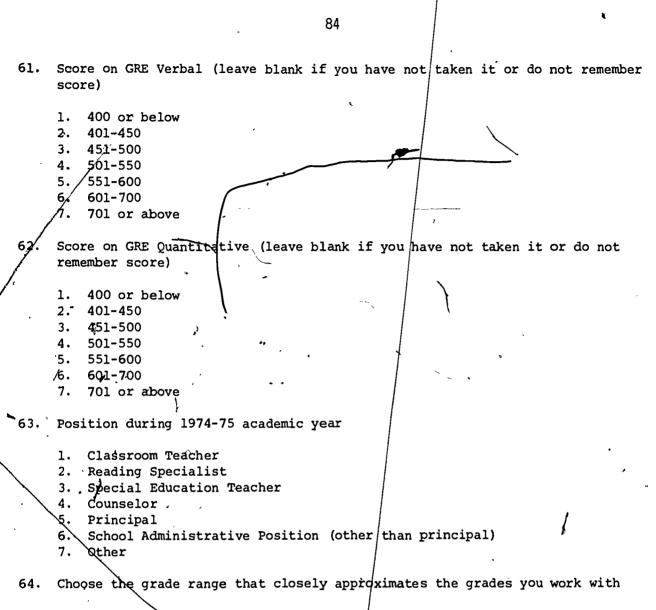

Note: The first alternative in the Op-Scan sheet is '0'. Be careful not to mark '0' if you mean to mark '1'.

The second part of the questionnaire asks for background information. The information obtained is potentially very helpful in conducting the course and in evaluating its usefulness. Please answer all questions on the form unless a question does not apply or if you cannot remember the information asked for. This information is kept confidential.

- 31. Reading instruction should focus more on reconstructing meaning from the written page than pronouncing words.
- 32. One responsibility of the primary reading teacher is to expose students to different kinds of experiences.
- 33. An analysis of oral reading miscue is more trouble than it's worth.
- 34. Reading should be integrated with all other classroom activities.
- 35. Contingency contracting is a method that lets children "goof off" and not make good use of their time in school.
- 36. There's nothing a teacher can do to develop reading readiness in students.
- 37. Information systems winking diagnosis and instruction are effective ways to plan instructional activities.
- 38. Vocabulary should be taught through real life experiences.
- 39. Grouping children on the basis of common skill needs is better than grouping them on the basis of instructional level.
- 40. Students'in your class should all read the same thing, so no one feels bad.
- 41. Teachers only need to diagnose student needs in the fall of the year.
- 42. The emphasis given phonics changes according to student needs.
- 43. Diagnosing student reading problems is the responsibility of the teacher, rather than the school administration.
- 44. Informal tests are better than standardized tests for placing students at appropriate levels.
- 45. Prescriptive instruction is the best way to teach reading.
- 46. A child should read all the way through every book she takes out of the library.
- 47. Kindergarten teachers do not have to worry about teaching students to understand stories.

- 48. If a class is large, there's no way to work with individuals.
- 49. A third-grade teacher only needs third-grade instructional materials.
- 50. Knowing how to understand a graph or table is an aspect of social studies and NOT an aspect of reading instruction.
- 51. A student is a good reader if he can read every word correctly.
- 52. Not using every page in the workbook is wasteful.
- 53. Scores on standardized tests provide adequate information for instruction.
- 54. If a child is not interested in reading, there is little a teacher can do to generate enthusiasm.
- 55. Time spent diagnosing could be better spent instructing.
- 56. If you don't have enough books for all your students, you cannot effectively use a set of materials.
- 57. There is so much material to cover in school that taking time to let children do "free reading" is not productive.
- 58. Sex
  - 1. Male
  - 2. Female
- 59. Description of community in which you teach (or work in some other area of education)
  - 1. Rural
  - 2. Suburban

#### CLASS RATING FORM

'This questionnaire deals with your reactions to today's instructional activities. The questionnaire consists of four parts:

Part I - TV Program (lecture)

Part II - Four-Channel Audio Segment

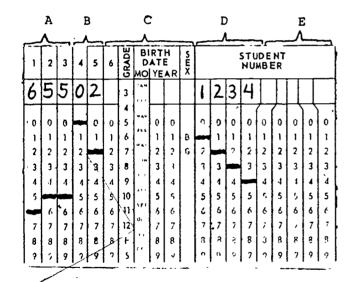

Part III - Seminar

Part IV - Laboratory Activities

Only fill out the parts that correspond to today's activities, e.g., if you saw a TV program (letture) and did the laboratory activities, you would fill out Parts I and IV.

Please answer as truthfully as possible. Your answers do not affect your grade in the course, but help us to assess the effectiveness of the course and suggest improvements.

Mark your answers on the Op-Scan sheet provided. Turn the Op-Scan sheet so that the box that says "STUDENT NUMBER" is on your lower right. Fill out the box labeled "1 2 3 4 5" and the box labeled "STUDENT NUMBER" as indicated in the diagram below.

- A copy this just as it appears
- B . fill in the 2 digit class meeting number. The site monitor can tell you the correct number for today.
- C leave blank
- D fill in YOUR 4 digit student number
- E leave blank

Use a soft-lead (#2) pencil to mark the answer sheet -- do not use a pen or ball-point. Be sure your mark fills the entire block of the response you wish to make. Your mark should be heavy, black and stay within the lines so that the machine can read your replies. If you change your mind or make a mistake, be sure that you erase completely. Do not make any other marks on the answer sheet.

Turn the sheet so that the words "STANDARD ANSWER SHEET-C" are on your lower left. Begin answering at the appropriate part for today's activities. Be careful that the item number on the questionnaire corresponds to the number on the Op-Scan sheet that you are marking.

98

### PART I: TV PROGRAM (Lecture)

Mark on the Op-Scan answer sheet the responses you selected to items 1 through 15 if you watched the first televised lecture today to satisfy course requirements. Use the same question set to fill in items 16-30 on the Op-Scan sheet if you watched a second televised lecture today to satisfy course requirements. Write the title of the program(s) you saw on the Op-Scan sheet in the space labeled 'School'.

- 1. (16) Which presentation mode helped you most to understand the content of today's TV lecture?
  - 1) the instructor talking on the screen
  - 2) classroom scenes with the instructor describing activities
  - 3) the instructor explaining the information contained on charts
  - 4) scenes of a teacher working with students
  - 5) interviews of experts or practioners
- 2. (17) Which presentation mode was least effective in communicating the ideas in today's TV lecture?
  - 1) the instructor talking on the screen
  - 2) classroom scenes with the instructor describing activities
  - 3) the instructor explaining the information contained on charts
  - 4) scenes of a teacher working with students
  - 5) interviews of experts or practioners
- 3. (18) The program might have been more effective if the coverage had been altered in which one of the following ways?
  - 1) less material had been covered but in greater depth
  - less material because there was too much to comprehend at one time
  - 3) more material relevant to the central issues of the course
  - 4) the program coverage was adequate
- 4. (19) Today's discussion may have been better-if more time had been devoted to which one of the following?
  - 1) more discussion of the theoretical aspects of today's topic
  - 2) more discussion of procedures for using the materials
  - 3) more examples of how the techniques are actually applied in the classroom
  - 4) the discussion was an adequate mix of theoretical, procedural, and application levels for today's topic
- 5. (20) The discussion of topics in today's program may have been better if less time had been devoted to which one of the following?
  - less discussion of the theoretical aspects of today's topic
  - 2) less discussion of procedures for using the materials
  - 3) fewer examples of how the techniques are actually applied in the classroom
  - 4) the discussion was an adequate mix of theoretical, procedural, and application levels for today's topic

- 6. (21) Which one of the following things might make the moderator more acceptable to you?
  - 1) if he enunciated more carefully
  - 2) if he understood more what he was talking about
  - 3) if he talked in a more natural way
  - 4) he is quite acceptable as he is
- 7. (22) Which one of the following improvements might make the lecture easier to follow?
  - 1) more explicit transitions between ideas
  - 2) more careful organization of the content
  - 3) greater amplification of main points
  - 4) more summary statements
  - 5) the program organization was acceptable the way it was
- 8. (23) What effect do you think today's program will have on your teaching?
  - 1) the information had little or no relevance for me in my teaching situation
  - 2) something I would like to use but probably won't be able to
  - 3) something I would like to use but don't understand enough to use
  - 4) something I plan to use
  - 5) something I already know or am using

Which of the following suggestions would have improved today's TV program?

- 9. (24) More close-ups of individual's faces were needed.
  - 1) yes 2) no
- 10. (25) More close-ups of charts, books, and other written materials were needed.
  - 1) yes 2) ന്o
- 11. (26) Charts and written materials needed to be held on the screen longer so that they could be read through.
  - 1) yes 2) no
- 12. (27) Charts and written materials needed to be on the screen for a shorter period.
  - 1) yes 2) no
- 13. (28) Did the pace of the program need to move
  - 1) slower
  - 2) faster
  - 3) the pace was acceptable

- 14. (29) What is your overall evaluation of today's TV program (lecture)?
  - excellent
  - 2) very good
  - 3) good
  - 4) fair
  - 5) poor
- 15. (30) Do you have a specific comment or suggestion about today's TV program to make?
  - 1) yes 2) no

If your answer was yes, write your comment on the reverse of the Op-Scan sheet.

### ♣ PART II: FOUR-CHANNEL AUDIO SEGMENT

Fill out items 41 to 53 only if there was a four-channel audio segment included in today's activities.

- 41. Did you ever push a button and not hear anything?
  - 1) yes 2) no
- 42. Was the volume satisfactory?
  - 1) yes 2) no
- 43. Did you ever NOT get the channel you selected?
  - 1) yes 2) no
- 44. Did you ever hear two or more channels at the same time?
  - 1) yes 2) no
- 45. Did you ever hear any static or odd noises? (you might hear 'bleeps', but these are supposed to be there)
  - 1) yes 2) no
- 46. The time interval in which to select a response was (choose one)
  - 1) too long
  - 2) too short
  - about right
- 47. Which one of the following changes might make the greatest improvement in the relevancy of today's audio review to today's topic?
  - if the content dealt more thoroughly with the concepts covered in the TV program
  - 2) if the content focused more on ways to apply the techniques described in the TV program
  - 3) if the content expanded upon concepts relevant to those introduced in the TV program
  - 4) it is quite good as it is
- 48. Which one of the following would have resulted in a better four-channel audio segment?
  - 1) there were more but shorter items
  - 2) there were more items of the same length as they are now
  - 3) there were more items of greater length than they are now
  - 4) there are enough items now of about the right length
  - 5) the problem is not with the number of items but with the use of the audio segment as an instructional medium

49.	Do you feel that the questions might be most improved if
	1) they were shorter
	2) the problem was more clearly stated
	3) both 1 and 2
	4) the length and clarity of the questions were satisfactory
50.	Do you feel the alternatives might be most improved if they were
	1) shorter
	2) longer
	3) fewer.
	4) they were O.K. as they were
51.	Do you feel the explanations of the answers might be most improved if they were
	1) more thorough but almost the same length
	2) briefer and more to the point
	3) longer with more thorough coverage
	4) the length and coverage was adequate
52.	What is your overall evaluation of today's four-channel audio segment?
	1) excellent
	2) very good
	3) good .
	4) fair /
	5) poor
53.	Do you have a specific comment or suggestion about the four-channel you want
	to make?
	1) yes 2) no
	If your answer was yes, write your comment on the reverse of the Op-Scan sheet answer sheet.
	*.

	·

#### PART III: SEMINAR

Answer items 81 to 90 only if a seminar was presented as part of today's activities.

- 81. Which one of the following format changes would you select to make the seminar format more effective?
  - a one-hour televised seminar with a 15 minute intermission so that questions can be generated and transmitted
  - 2) a two-hour seminar with several 15 minute intermissions for question generation and transmission
  - 3) one-hour televised seminar with the opportunity for question generation during the program and 15 minutes prior to the program
  - 4) one-hour television seminar with direct voice line hook-up between individual sites and TV studio
  - 5) one-hour conference call between one or more content experts and all sites
- 82. Which one of the following would have made today's seminar more effective?
  - 1) the course instructor answering the questions himself without guests
  - 2) use more teachers as guests
  - 3) use more professors or other experts as guests
  - 4) the seminar participants were fine
- 83. Which one of the following seminar formats might help you think of more meaningful questions to ask?
  - have at the beginning of the seminar a 10 minute summary of course content covered since the last seminar
  - 2) show a 10 minute film with short segments from previous programs at the beginning of the seminar
  - 3) show at the beginning of the seminar a short film illustrating several new classroom demonstrations of material covered
  - 4) have the opportunity to use the whole seminar for question answering and discussion rather than spending part of the program for question stimulation
- 84. The answers to the questions could have been more valuable had they been handled in which one of the following ways?
  - 1) less discussion of theoretical aspects of the question
  - 2) more frequent use of specific classroom examples
  - 3) more direct answers to the questions
  - 4) I was very satisfied with the answers I heard

85.	The seminar	moderator	could have	been more	<pre>effective</pre>	had	he been	more alert
	to which on	e of the fo	ollowing?					

- 1) kept the guests on the topic better
- 2) provided summary statements occasionally
- 3) allowed each guest equal time to respond to questions
- 4) kept the seminar moving at a faster pace so more questions could be answered
- 86. Which one of the following factors would have made the seminar guests' presentations more useful?
  - not repeating themselves
  - 2) keeping on the topic of the question
  - 3) allowing them to expréss themselves better
  - 4) relating their answers to practical situations
  - 5) the guests' presentations were excellent
- 87. If there was not time to answer your questions on the seminar do you feel that the answer you will receive via teletype or VHF will be useful?
  - 1) yes 2) no
- 88. Do you feel that answering questions via teletype or VHF is a service that needs to be continued?
  - 1) yes 2) no
- 89. What is your overall evaluation of today's seminar?
  - 1) excellent
  - 2) very good
  - 3) good
  - 4) fair
  - 5) poor .
- 90. Do you have a specific comment or suggestion about the seminar you want to make?
  - 1) yes 2) no

If your answer was yes, write your comment on the reverse of the Op-Scan sheet.

### PART IV: LABORATORY ACTIVITIES

Answer items 121 through 134 only if there were laboratory activites (lab) today.

- 121. Did you use materials from the reference shelf during today's meeting?
  - 1) I needed to, but there was not enough time
  - there was no need to use the materials today
  - 3) I used the materials a little
  - 4) I used the materials quite a bit
- 122. How much time did you spend working on the lab today?
  - 1) 30 minutes or less
  - 2) 45 minutes
  - 3) 60 minutes
  - 4) 90 minutes
  - 5) two hours or more

How would you have improved today's laboratory activities?

- 123. For today's lab I would try to cover
  - 1) more material
  - less material
  - 3) the lab was O.K. in this area
- 124. Clearer instructiona are needed for the lab activities.
  - 1) yes 2) the lab was O.K. in this area
- 125. Select lab activities more related to today's topic.
  - 1) yes 2) the lab was O.K. in this area
- 126. Allow more time for the lab activities to be completed.
  - 1) yes 2) the lab was O.K. in this area
- 127. Provide activities that were of a more applied and practical nature,
  - 1) yes 2) the lab was O.K. in this area
- 128. Require less material to be read prior to class as preparation.
  - 1) yes 2) the reading assignments were O.K.

- 129. Require more relevant, preparatory readings for today's activities.
  - 1) yes 2) the reading assignments were O.K.
- 130. Stock materials that are more relevant on the reference shelf.
  - 1) yes 2) the reference shelf was adequate for today's assignment
- 131. Would have assigned more useful homework last'week.
  - 1) yes 2) no, the homework was very useful
- 132. What is your overall evaluation of today's laboratory activities?
  - 1) excellent
  - 2) very good
  - 3) good
  - 4) fair
  - 5) poor
- 133. Did you feel there were any activities that were especially innovative or creative in today's lab?.
  - 1) yes 2) no

If so, please identify those activities on the back of the Op-Scan sheet.

- 134. Do you have a specific comment or suggestion about the lab you want to make?
  - 1) yes 2) no

If your answer was yes, write your comment on the reverse of the OpaScan sheet.

DPRI INFORMATION SYSTEMS QUESTIONNAIRE

### Instructions

This questionnaire has two parts. Part I is concerned with your attitudes toward the information systems presented in class. Part II is concerned with the degree to which you used the information systems to assist you in developing course materials for the classes you teach. Please answer as truthfully as possible. Your answers do not affect your grade in the course, but help us to assess the effectiveness of these systems and suggest improvements.

Write your replies on the Op-Scan sheet provided. Turn the Op-Scan sheet so that the box that says "STUDENT NUMBER" is on your lower right. Fill out the box labeled "1 2 3 4 5" and the box labeled "STUDENT NUMBER" as indicated in 'e diagram below.

- A copy this just as it appears "66518"
- B leave blank .
- fill in YOUR 4 digit student number
- D leave blank

Use a soft-lead (#2) pencil to mark the answer sheet -- do not use a pen or ball-point. Be sure your mark fills the entire block of the response you wish to make. Your mark should be heavy black and stay within the lines so that the Op-Scan machine can read your replies. If you change your mind or make a mistake, be sure that you erase completely. Do not make any other marks on the answer sheet.

Turn the sheet so that the words "STANDARD ANSWER SHEET-C" are on your lower left. Begin answering at number 1 Indicate your answers to the items by placing a heavy vertical line in the column beside the appropriate item number on the answer sheet. Be careful that the item number on the questionnaire corresponds to the number on the Op-Scan sheet that you are marking.

PART

## For Part I Mark:

- 5) if you strongly agree with the statement
- 4) if you moderately agree
- 3) if you feel neutra'
- 2) if you moderately disagree
- 1) if you strongly disagree

If you did not use the information system referred to in the statement, do not rate the statement (leave that item on the Op-Scan sheet blank).

- The Select-Ed manual adequately explained how to use and interpret this information system.
- 2. The search request form for the Select-Ed system was clear in its format.
- 3. The Select-Ed search (es) I ran provided me with useful information.
- 4. The information received from the Select-Ed system was easy to interpret.
- 5. If the Select-Ed system were available to me, in my school system,
  I would use it to aid me in my teaching.
  - The Kentucky System manual adequately explained how to use and interpret this information system.
- The search request form for the Kentucky System was clear in its format.
- :8. The Kentucky System search(es) I ran provided me with useful information.
  - 9. The information received from the Kentucky System was easy to interpret.
- 10. If the Kentucky system were available to me, in my school system, I would use it to aid me in my teaching.

<sup>\*</sup>Kentucky System is an abbreviation for "Kentucky Special Education Materials Information System."

## PART II

### Section A

- 11. How many times during this semester did you request searches using the Select-Ed system?
  - 1. I only did the class assignment
  - 2. One time, other than the class assignment
  - 3. Two times
  - 4. Three times
  - 5. Four, or more times
- 12. How many times during this semester did you request searches using the Kentucky System?
  - 1. Never
  - 2. One time
  - 3. Two times
  - 4. Three times
  - 5. Four, or more times

#### Section B

If you <u>did</u> request a search using the Select-Ed system, in addition to the one search that was a class assignment, please skip to Section C. Otherwise answer yes or no to Questions 13-15 below concerning your reasons for not requesting additional Select-Ed searches.

- 13. I did not have the time to carefully study the manual so I could run a search.
  - 1. Yes
  - 2. No
- 14. The directions and procedures to request a search were confusing and made it difficult to use the system.
  - 1. Yes
  - 2. No
- 15. I did not use the Select-Ed system because it just gives you references that you have to look up in the library.
  - 1. Yes
  - 2. No

## Section C

If you <u>did</u> request any Kentucky System searches, skip to Section D. If you did not request a search using the Kentucky System answer yes or no to items 16-18 below.

- 16. I did not have the time to carefully study the manual so I could run a search.
  - 1. Yes
  - 2. No
- 17. The directions and procedures to request a search were confusing and made it difficult to use the system.
  - 1. Yes
  - 2. No
- 18. I did not use the Kentucky System because it just gives you references that you have to look up in the library.
  - 1. Yes
  - 2. No

## Section D

Answer yes to the following suggested improvements in the information system procedures if you think such improvements would be of benefit. Answer no if you do not feel that the suggestion would be of substantial benefit.

- 19. Provide manuals that are easier to understand.
  - 1. Yes
  - 2. No
- 20. Provide simpler forms to use to request searches.
  - l. Yes
  - 2. No
- 21. Give the site monitor training in the information system so that he/she is a more effective instructor.
  - 1. Yes
  - 2. No
- 22. Develop a video program that would explain the use of the information systems in a

  more adequate manner than the present video program (program 7 Prescriptive Instructional Systems).
  - 1. Yes

## Section E

Would you have utilized the information systems more if the materials recommended in the searches were readily available

23.	Α÷	the	AESP	classroom	cito?

- 1. Yes
- 2. No

## 24. At your school?

- 1. Yes
- 2. No

25. At some central location (e.g., school district headquarters, local college, etc.)?

- 1. Yes
- 2. No

Did you know that you could run searches on your own (over and above the class assignment?

26. For Select-Ed

- .l. Yes
- 2. No

27. For the Kentucky System

- 1. Yes
- 2. No

28. Did your site coordinator encourage you to run information searches on your own?

- 1. Yes
- 2. No

Did you incorporate materials suggested by your searches in your lessons?

- 29. Select-Ed suggested materials
  - 1. Yes
  - 2. No
- 30. Kentucky system suggested materials
  - 1. Yes
  - 2. No

- 31. Did you look up materials suggested in the searches?
  - 1. Yes
  - 2. No
- 32. If your answer to item 31 is no, why did you not look up materials suggested by the searches? Otherwise, leave this item blank.
  - 1. I did not have time
  - 2. Materials suggested could not be found within a reasonable distance
  - 3. I did not know where to go to find the materials
  - 4. It was too much trouble
  - 5. Other reason

Rate the following ten instructional activities according to the quantity of useful information you received from each. Make your standard of reference an average, graduate education course. Rate the value of the activity by marking the point on the scale that best expresses your attitude. The closer to 1 the more outstanding you found the activity, while the closer to 8 the more unacceptable you found the activity.

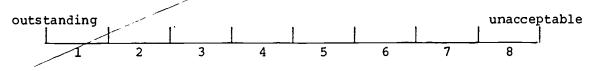

1. <u>Pre-Program Preparation</u> compared to work usually assigned in other graduate classes prior to covering material in class.

2. TV Program compared to a graduate lecture.

3. Four-Channel Audio compared to class quizzes followed by a discussion of the answers.

Comments:

4. <u>Laboratory Activities</u> compared to laboratory activities associated with other graduate courses.

Comments:

5. On-site Reference Materials compared to materials placed on reserve by other graduate instructors.

Comments:

6. <u>Televised, Interactive Seminars</u> compared to other graduate seminars and class discussions.

Comments:

7. The Seminar Host and Guests as knowledgeable, fluent discussants of the seminar topics.

Comments:

8. <u>Information Retrieval Systems Materials</u> compared to materials instructors in other graduate courses locate to help specific individuals.

Comments:

٠,

9. Follow-up Activities and homework assignments compared to similar activities in other graduate courses.

Comments:

10. The Site Coordinator as an effective course leader.
